

Exercise - Create a web app in the Azure portal

5 minutes

This module requires a sandbox to complete. A [sandbox](#) gives you access to free resources. Your personal subscription will not be charged. The sandbox may only be used to complete training on Microsoft Learn. Use for any other reason is prohibited, and may result in permanent loss of access to the sandbox.

Microsoft provides this lab experience and related content for educational purposes. All presented information is owned by Microsoft and intended solely for learning about the covered products and services in this Microsoft Learn module.

[Sign in to activate sandbox](#)

In this unit, you'll use the Azure portal to create a web app.

Create a web app

Sign in to the [Azure portal](#) using the same account you used to activate the sandbox.

1. On the Azure portal menu or from the **Home** page, select **Create a resource**. Everything you create on Azure is a resource. The **Create a resource** pane appears.

Here, you can search for the resource you want to create, or select one of the popular resources that people create in the Azure portal.

2. In the **Create a resource** menu, select **Web**.
3. Select **Web App**. If you don't see it, in the search box, search for and select **Web App**. The **Create Web App** pane appears.
4. On the **Basics** tab, enter the following values for each setting.

[Expand table](#)

Setting	Value	Details
Project Details		
Subscription	Concierge Subscription	The web app you're creating must belong to a resource group. Here, you select the Azure subscription to which the resource group belongs (or will belong, if you're creating it within the wizard).
Resource Group	Select [Sandbox resource group]	The resource group to which the web app will belong. All Azure resources must belong to a resource group.
Instance Details		
Name	<i>Enter a unique name</i>	The name of your web app. This name will be part of the app's URL: <i>appname.azurewebsites.net</i> . The name you choose must be unique among all Azure web apps.
Publish	Code	The method you want to use to publish your application. When publishing an application as code, you also must configure Runtime stack to prepare App Service resources to run your app.
Runtime stack	.NET 6 (LTS)	The platform on which your application will run. Your choice may affect whether you have a choice of operating system - for some runtime stacks, App Service supports only one operating system.
Operating System	Linux	The operating system used on the virtual servers that will run your app.
Region	East US	The geographical region from which your app will be hosted.
Pricing plans		

Setting	Value	Details
Linux Plan	Accept default	The name of the App Service plan that will power your app. By default, the wizard will create a new plan in the same region as the web app.
Pricing plan	Free F1	The pricing tier of the service plan being created. The pricing plan determines the performance characteristics of the virtual servers that power your app and the features to which it has access. Select Free F1 in the drop-down.

Pricing plan **Free F1** (Shared infrastructure)

Zone redundancy

An App Service plan can be deployed as a zone redundant service in the regions that support it. This is a deployment time only decision. You can't make an App Service plan zone redundant after it has been deployed [Learn more](#)

Zone redundancy ☐ **Enabled:** Your App Service plan and the apps in it will be zone redundant. The minimum App Service plan instance count will be three.

☒ **Disabled:** Your App Service Plan and the apps in it will not be zone redundant. The minimum App Service plan instance count will be one.

[Review + create](#) [< Previous](#) [Next : Deployment >](#)

5. Leave any other settings as default. Select **Review + Create** to go to the review pane, and then select **Create**. The portal shows the deployment pane, where you can view the status

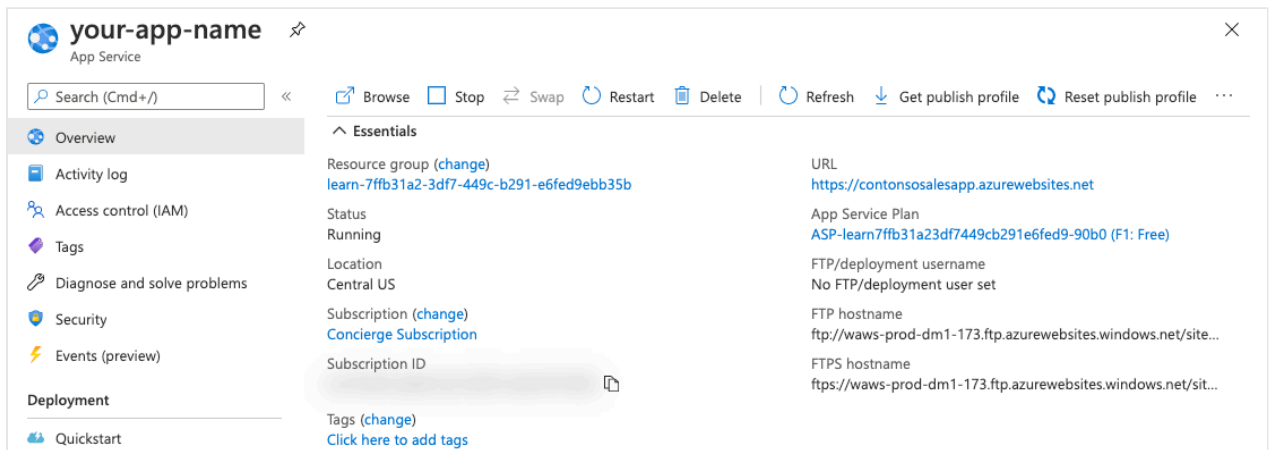

of your deployment.

! Note

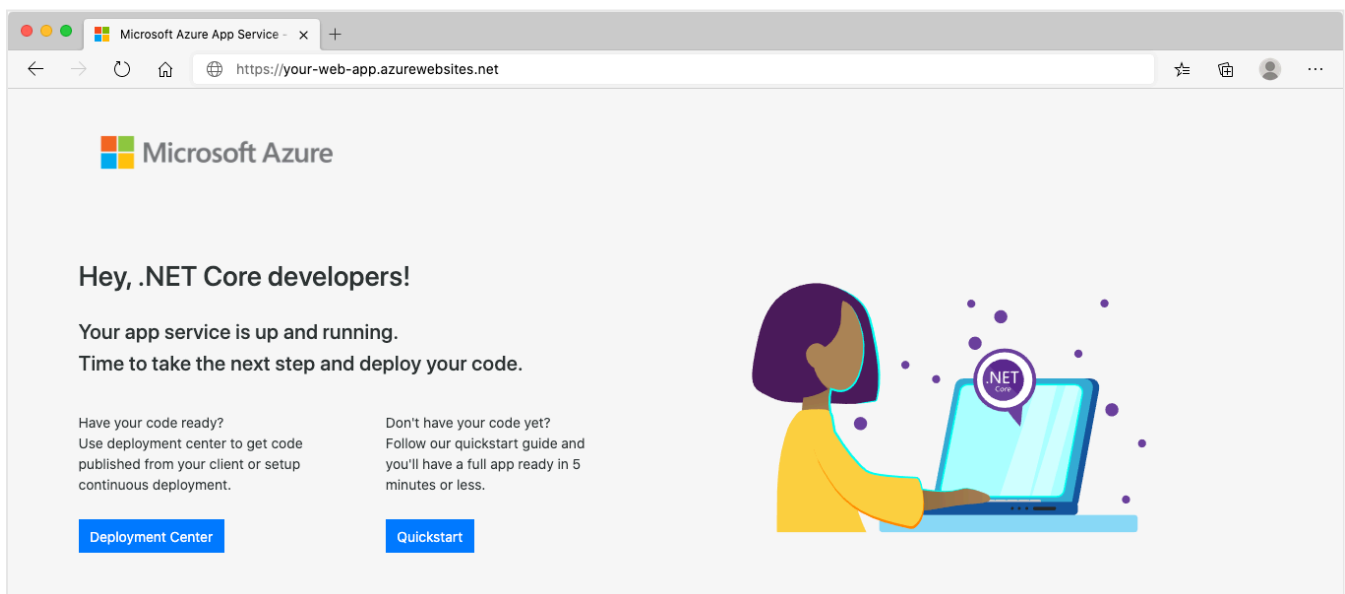

It can take a moment for deployment to complete.

Preview your web app

1. When deployment is complete, select **Go to resource**. The portal shows the App Service Overview pane for your web app.

2. To preview your web app's default content, select the URL under **Default domain** at the top right. The placeholder page that loads indicates that your web app is up and running and is ready to receive deployment of your app's code.

Leave the browser tab with the new app's placeholder page open. You'll come back to it after you've deployed your app.

Next unit: Prepare the web application code
